How each webpage will connect:

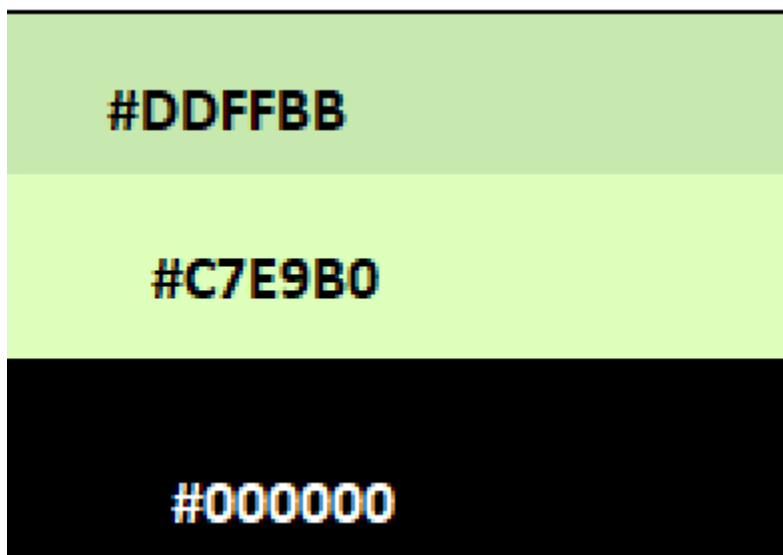

Color scheme 1:

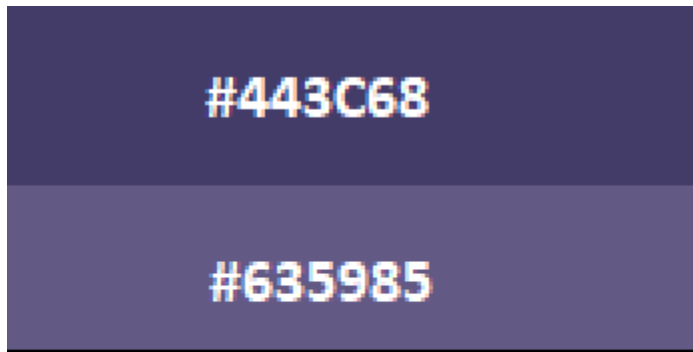

I choose these colors for the light color theme, they are quite bright colors and blend together well. #FFD966 is for the background of the blocks which makes them pop out from the background of the site. #FFF2CC is for the background of the site, it is quite lighter than the #FFD966 so I thought to put it as the background so the blocks could stand out. I used #000000 for the text color to make the text readable and stand out.

Color scheme 2:

I chose these colors for the green theme; they are quite nice colors I think and look very well together. #DDFFBB is for the blocks background as it is a darker color which makes the blocks stand out from the background. The background color is #C7E9B0. I chose this as the background color of the site as it makes the blocks stand out more due to it being a lighter color. I used #000000 for the text color to make the text readable and stand out.

Color scheme 3:

#FFFFFF

I choose these colors for the dark theme as they are darker colors and look well together. #443C68 is the background color of the blocks to make the blocks stand out from the background of the site. #635985 is the background color of the site and is quite lighter than the background of the blocks, which makes the blocks stand out. #FFFFFF is for the text color as white stands out from the background color of the blocks.
